

NEWS RELEASE – Global Sustainable Energy Solutions Pty Ltd (GSES)

13 September 2017

FOR IMMEDIATE RELEASE

GSES Releases new 8th Edition of Stand Alone Power Systems: Design and Installation

Global Sustainable Energy Solutions Pty Ltd (GSES) announces the release of the 2017 version of the industry handbook: [Stand Alone Power Systems: Design and Installation Edition 8](#). This comprehensive resource has been updated and revised extensively to include the industry's progression to the current revised industry best practices, system design, system economics and product selection.

Richard Collins, Technical Business Manager, commented: “*Stand Alone Power Systems: Design and Installation Edition 8 has been in the making for over two years with countless hours of writing and reviewing by GSES dedicated staff. This extensively updated and expanded publication is now in its eighth edition and is an essential resource for electricians, solar installers and students within the renewable energy disciplines. This publication provides comprehensive knowledge and guidance for the successful design and installation of Stand Alone Systems (SAPS)*”.

The latest version of this GSES' industry publication addresses the needs of the ever-changing landscape of the Renewable Industry: including updated diagrams and Australian Standards references throughout. *Stand Alone Power Systems: Design and Installation Edition 8* is intended to be used in conjunction with the upcoming SAPS course, which will involve an extensive practical component as well as tutor-supported online tasks and assessments. The latest edition includes: fundamentals of SAPS, generation and storage technologies, design of SAPS, system installation and maintenance, worked examples and case studies.

Stand Alone Power Systems: Design and Installation Edition 8 is available now for \$176 including GST, and will be included as part of every enrolment into the SAPS: Design and Install course, both can be purchased in the GSES [online shop](#).

GSES is a multi - disciplinary renewable energy engineering, training and consultancy company specialising in PV solar design, online and face-to-face solar training, solar book publishing and PV system audits. Collectively, GSES has over decades of local and global experience undertaking projects in Australia, New Zealand, Asia, Africa and the Pacific Islands. GSES leads Australia in education and training in the Renewable Energy Innovation and Technology Sector and actively partners with government, private enterprise and local communities worldwide in facilitating the growth and development of the renewable energy industry through education, training, engineering, consulting and publications.
